

## Luceo Staff Blog-21st-

### ■ Light and Laser Science and Technology Fair 2020 (7th UV Fair)

Hello everyone. This time, from November 11th (Wednesday) to 13th (Friday), We are pleased to present the exhibition report of the "Light and Laser Science and Technology Fair 2020" held at the Tokyo Metropolitan Industrial Trade Center (Hamamatsuchokan).

### ■ Strain tester

Luceo has been exhibiting at this exhibition since two years ago, and this is the third exhibition. A strain tester, a polarizing plate, and a wave plate were exhibited in one frame of the UV fair booth, and many people visited us. Thank you again.

With the fully automatic strain testers LSM-9100W and LSM-9001S, we were able to receive inquiries and sample measurement requests from visitors by demonstrating the measurement of resin smartphone covers and glass lamp bulbs.

### ■ Polarizing plate / wave plate

In addition to the familiar "yellow cat" at the Luceo booth, the addition of the "crane" attracted attention and attracted many customers. These cats and cranes are made of origami with wavelength film, and by rotating the polarizing plate, you can enjoy understanding the functions of the polarizing plate and the wavelength plate.

We also received interesting inquiries about the "near-ultraviolet polarizing plate" that can handle near-ultraviolet rays of 300 to 400 nm and the "ultra-wideband wave plate" that has been receiving particular attention recently.
