■Optics & Photonics Kansai 2022

We are pleased to present our exhibition report of "Optical & Laser Kansai 2022" held at Mydome Osaka on July 20 (Wed.) and 21 (Thu.).

■Polariscope

This was the second time that Luceo exhibited at this exhibition. This time, we exhibited polariscope, polarizers, and waveplates. Many visitors came to our booth. We would like to thank you again for your visit.

We received many inquiries from visitors by showing videos which is about operation of our polariscope, and measurement example of glass lamp valve with FullAuto StrainEye LSM-9001S.

■Polarizers and Waveplates

In addition to the well-known "crane" of Luceo's exhibits, the addition of "color-changing polarizers and waveplates" got a lot of attention of visitors. By rotating the polarizer placed on the back, the color of the polarizers and waveplates change because of the contrast of the polarizer and the phase difference of the waveplate. With the display of this item, visitors enjoyed understanding the function of polarizers and waveplates. We also displayed the "Super Broadband Retax (SB-RETAX)" on a rotating stand which lights up with a rainbow-colored LED. And this got a lot of attention and then, we had some interesting inquiries too.

In the showroom at Luceo's headquarter, we display our polariscope, polarizers, and waveplates. You are welcome to try them out, so please feel free to contact us for more information.
